

S100A7 Human

Description: S100A7 Human Recombinant produced in E.coli is a single, non-glycosylated polypeptide chain containing 121 amino acids (1-101) and having a molecular mass of 13.6 kDa. The S100A4 is fused to a 20 amino acid His-Tag at N-terminus and purified by proprietary chromatographic techniques.

Catalog #: PRPS-156

For research use only.

Synonyms: S100 calcium-binding protein A7 (psoriasin 1), S100A7c, PSOR1.

Source: Escherichia Coli.

Physical Appearance: Sterile Filtered clear solution.

Amino Acid Sequence: MGSSHHHHHH SSGLVPRGSH MSNTQAERSI IGMIDMFHKY
TRRDDKIDKP SLLTMMKENFPNLSACDKK GTNYLADVFE KKDKNEDKKI DFSEFLSLLG
DIATDYHKQS HGAAPCSGGS Q

Purity: Greater than 95.0% as determined by SDS-PAGE.

Formulation:

S100A7 protein at 0.5mg/ml in 20mM Tris-HCl, pH-8, 0.1M NaCl, 1mM DTT and 30% Glycerol.

Stability:

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.

Usage:

NeoBiolab's products are furnished for LABORATORY RESEARCH USE ONLY. The product may not be used as drugs, agricultural or pesticidal products, food additives or household chemicals.

Introduction:

S100A7 is a member of the S-100 family of calcium binding proteins and is produced through a non-classical secretory pathway to the cytoplasm. S100A7 takes part in the regulation of several cellular courses, such as cell cycle, cell progression and cellular differentiation. S100A7 holds two EF-hand domains and is extremely upregulated in psoriatic epidermis, in addition to bladder squamous cell carcinoma and breast cancer tissue, signifying a probable part in carcinogenesis.
